

An illustration of a woman with long dark hair, wearing a red long-sleeved shirt, sitting on a large, light blue flower. She is holding a red watering can and watering the flower. The background is a solid grey color. The title 'Beyond Self Care' is written in a white, elegant serif font across the middle of the image.

Beyond Self Care

Kate Sweeney, MSW, LCSW-C, Co-Director

Margo Candelaria, PhD, Co-Director & Research Associate Professor

Parent, Infant and Early Childhood Program, The Institute for Innovation & Implementation,
School of Social Work, University of Maryland Baltimore

Ready at Five, School Readiness Symposium, December 15, 2021

The background image shows a workshop environment. On the right, a woman with brown hair in a bun is seated at a table, looking at a laptop. In the center, a woman with long dark hair is standing and pointing towards a wall covered in numerous yellow and pink sticky notes. Other people are partially visible in the background, suggesting a collaborative meeting or workshop setting.

Workshop Description

Over the past 2 years, our work and lives have been significantly impacted by the COVID-19 global pandemic and related shuttering of classrooms and childcare settings.

While our hope was that this school year would be a return to “normalcy,” we know clearly that the children entering classrooms, their families and the early childhood educators and service providers are exhibiting the cost and stress of the past two years, making typically expected tasks significantly more difficult.

This workshop will focus on supports that the workforce needs during this time, and ways to approach this at the individual, classroom, programmatic and systemic levels.

Participants in this workshop will have the unique opportunity to engage in a facilitated learning community beyond the Symposium to support ongoing discussions about practical ways to support the workforce.

Agenda

- What we've learned from the past two years
 - But were not applying it – we are asking kids to operate as if they haven't missed time, families and teachers to do the same
- The result is STRESS - Normalizing and measuring your own stress
- Developmentally appropriate responses to stress
- Implementing Supports for self-regulation and slowing down the process (FAN)
- Community Services like Consultation, MCF, Parents Place
- Returning to the basics: Pyramid Model
- Individual, classroom, programmatic and systemic levels.
 - Slowing down people's expectations we cannot expect kids to "skip grades" kids are showing up less prepared.

Objectives for Today

- Define and describe the social/emotional (and overall) programming shifts that are happening within your settings as a result of the current COVID-19 context.
- Share ideas and barriers related to reopening, self-care, and the establishment of routines and expectations.
- Apply this perspective at the individual, classroom, programmatic and systemic levels.
- Discuss the opportunity to participate in an ongoing community of practice and support for the early childhood workforce during this time.

Introductions

- Your name
- Your role
- Your agency
- What compelled you to select this session?

Now A
Little
About Us!

PIEC (Parent Infant Early Childhood) Program

*The Institute for Innovation & Implementation
University of Maryland School of Social Work*

The Institute: The University of Maryland's Institute for Innovation & Implementation serves as a training, technical assistance, evaluation, policy, systems design, and finance center to supports local, state and national governments and organizations to implement effective systems and practices to best meet the needs of children and youth with complex behavioral needs and their families. The Institute brings with it nationally recognized expertise in the fields of children's behavioral health, systems of care, evidence-based and promising practices, care management, finance, policy, systems design, evaluation, juvenile justice and child welfare.

PIEC Unit: The Parent, Infant, and Early Childhood (PIEC) unit within the Institute is focused specifically on infant and early childhood mental health efforts throughout the state of Maryland and currently partners with a range of providers as well as state and local agencies to support the growth of the system of care targeting at-risk parents and young children. The PIEC team is comprised of experts in the field of maternal and child health policy, program development, research and evaluation and partners with National content experts as well as the Institutes' National Technical Assistance Network to raise the voice of infants and young children in issues related to mental health financing, homelessness in transition age youth, adult substance use and intimate partner violence. PIEC work output includes: federal and state quarterly and annual reports, policy and

A photograph of a man and a young child sitting on a light-colored carpeted floor, playing together. The man, who has a beard and is wearing a blue and white checkered shirt, is smiling and looking at the child. The child, a young girl with curly hair wearing a blue and white striped dress, is also smiling and looking at the man. They are both holding wooden mallets and playing a blue xylophone. There are other toys on the floor, including a blue ball and some colorful blocks. The background shows a bright window with white curtains and a white sofa.

Perspective During COVID

- The early childhood workforce is adaptable by nature.
- We are community focused, we are used to thinking collaboratively across systems, and generations, and families.
- This situation has raised the profile of many things that we care about:
 - Family trauma
 - Disparities and issues of equity and racism
 - Supporting the ECE workforce
- Policy changes can happen as a result of this on the national, state and local levels.

What we know from the past 2 years

- Teachers are *highly* stressed
- Children are illustrating higher behavioral and developmental needs
- Families are harder to engage - they are blocked from the building, *but it comes at a cost!*
- The system is expecting none of the above to impact test scores or other measures of child impact

'We Need To Be Nurtured, Too': Many Teachers Say They're Reaching A Breaking Point

Former Teacher of The Year shares struggles during pandemic

A former Minnesota Teacher of the Year and current elementary school principal, Ryan Vernosh underscored the depth of the levels of stress and burnout last week when he resigned from a state education policy board and then outlined why he did so on social media.

On Twitter Friday, Vernosh posted his resignation letter, citing the pressures of teaching during COVID and increased threats to his safety over pandemic protocols at his school, Brimhall Elementary in Roseville, for the resignation. But his primary reason for stepping down, he said, was his own mental health.

Current Status of Academic Success

MAP

- The pass rate for math fell by more than half from the 33% who passed in the spring of 2019.
- English scores were down by about 8 percentage points since testing before the pandemic.

KRA

- 40% of students were prepared for kindergarten compared to 47% in the two years before the pandemic.

A photograph of a classroom with several children seated at their desks. In the foreground, a young girl with dark hair, wearing a pink jacket and a light blue surgical mask, is raising her right hand in a 'V' sign. She is holding a pencil over an open book. To her left, a boy in a blue shirt and mask is also raising his hand. In the background, another girl is visible, also wearing a mask. The classroom walls are decorated with colorful paper houses and hot air balloons. A large, semi-transparent white circle on the right side of the image contains text and a bulleted list.

Padlet

How is stress showing up in your settings

- In the kids?
- In the adults?
- In the caregivers/families?
- In administrators?

Educators need more
than an extra day to
extend spring break

What
strategies
have helped
and which
haven't?

"A two-year-old is kind of like having a blender, but you don't have a top for it."
-Jerry Seinfeld

Starting with the premise that kids, and parenting, and families are stressful under normal circumstances!

Children are dependent on adults for regulation. So, how do adults facilitate regulation?

- Parents facilitate Emotion Regulation in Empathic & Sensitive Relationships by:
 - Discussion of feelings
 - Modeling
 - Manageable, predictable and consistent routines
 - Parental self efficacy
 - Confidence in parent-child relationship
 - Parent's ability to manage their own emotions

Social emotional readiness

Why does getting ready for kindergarten include focusing on social emotional development?

- Children who are viewed as ready for kindergarten typically exhibit high attention, approach, and adaptability coupled with low activity and reactivity.
- These characteristics tend to be especially valued by teachers and describe a child who is “teachable,” or school ready.
- Since many children enter formal schooling earlier by attending pre-K for 4-year olds, often called 4-year-old kindergarten, there is a need to examine school readiness earlier than kindergarten, which may look very different developmentally.

Defining Mental Health for Early Childhood

Infant-early childhood mental health is the developing capacity of the child from birth to 5 years of age to form close relationships, experience, tolerate and express a range of emotions without lasting collapse, and explore the environment and learn.

Defining Mental Health for Early Childhood

Infant-early childhood mental health is the developing capacity of the child from birth to 5 years of age to form close relationships, experience, tolerate and express a range of emotions without lasting collapse, and explore the environment and learn.

The:

- lack availability of routines,***
- lack of exposure to environments focused on early childhood,***
- lack of access to peers,***
- exposure to the stress of their caregivers,***
- loss of loved ones has all impacted young developing children's access to these "normal" developmental activities.***

Digestion
Blood Pressure
Heart Rate
Respiration
Body Temperature

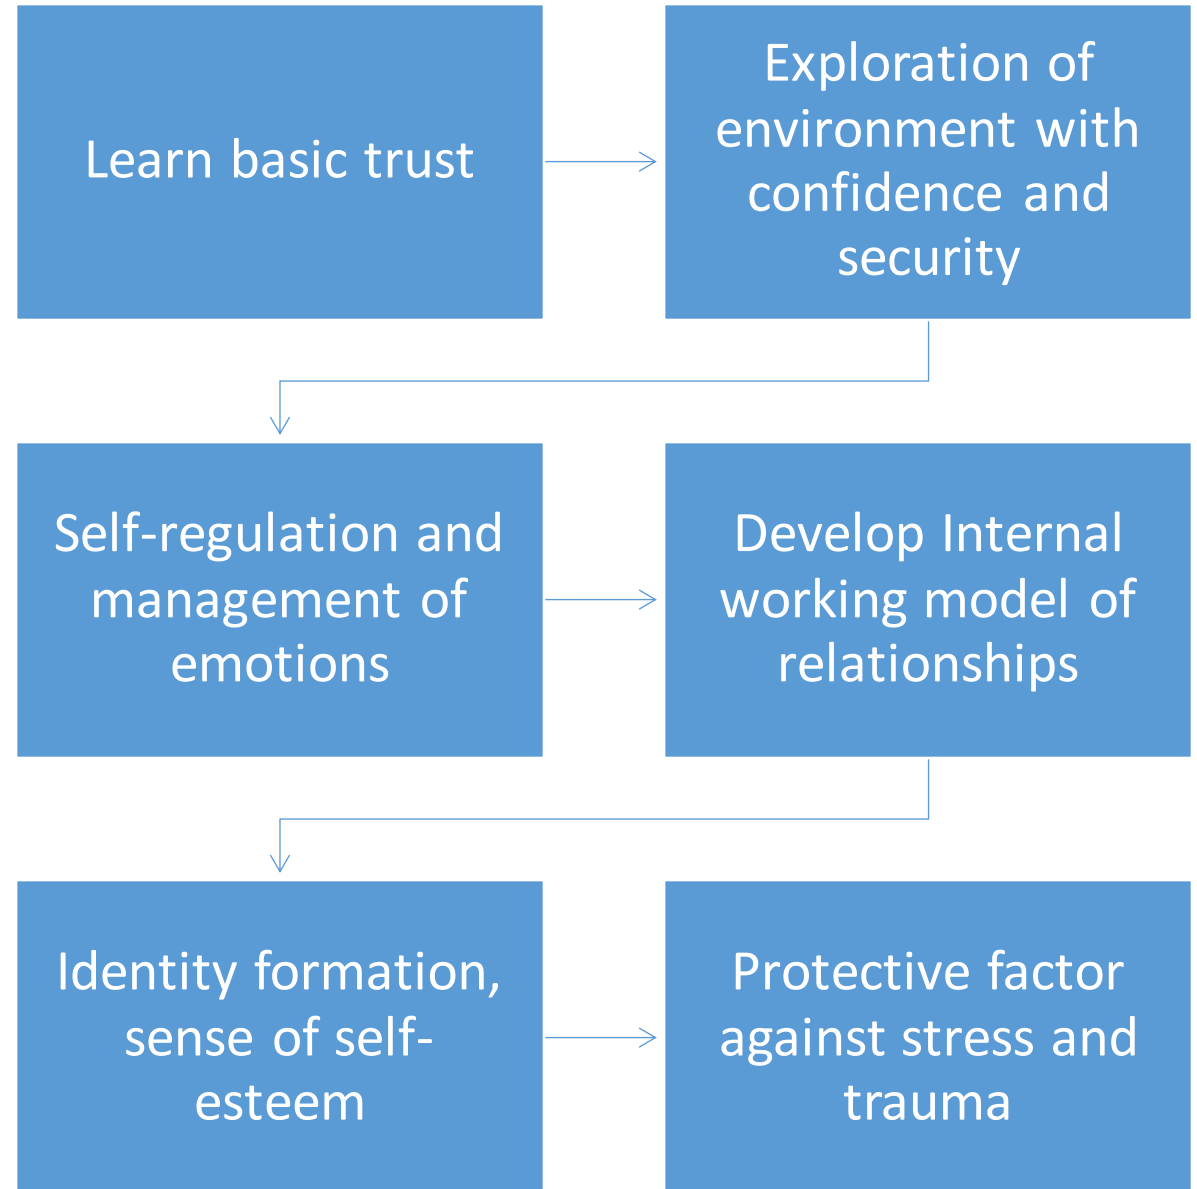

The Importance of Relationships:

- Children grow and thrive in the context of dependable relationships.
- These relationships must provide love, nurturance, security, responsive interaction, and encouragement of exploration.
- Without at least one such relationship, development is disrupted and consequences can be severe and long lasting. If restored, however, a relationship can foster remarkable recovery.
- Nurturing and responsive relationships build healthy brain architecture that provides a strong foundation for learning, behavior, and health.
- When protective relationships are not provided, elevated levels of stress hormones disrupt brain architecture by impairing cell growth and interfering with the formation of healthy neural circuits.

Fussy Baby Network[®]

- National model prevention program
- FAN Approach to Family Engagement and Reflective Practice
- Provided FAN training in 19 states and internationally

“Anyone who listened helped.”

Connection is built by BEING WITH:

“To share in another’s experience with no attempt to change what the person is doing or believing” - Stern, 1985

Feedback from Providers and Supervisors

Stay with the process longer; don't rush to fix

Feel less stressed in their roles

Stay calm and regulated in difficult situations

See more from parent's perspective

More comfortable holding and exploring parent's negative feelings about child

Elicit more from the parent

Focus more quickly on the parent/child relationship

Home visitors have increased reflective capacity and reduced burnout

Dysregulation is a Cue and
Opportunity

- What do you need.
- What is your response telling you?

Agenda

- Individual, classroom, programmatic and systemic levels.
 - Slowing down people's expectations we cannot expect kids to "skip grades" kids are showing up less prepared.

Team Approach For Early Educators: Parallel Process of Providers & Supporting Families

Importance of Collaborative Teaming: Early Educators often don't have background in behavior, limited experience with teaming and often lack formal credentials.

Early Childhood Mental Health Consultation

- Early Childhood Mental Health Consultation project is both child/family focused and classroom/program focused.
 - This hybrid model allows consultants to focus on specific child behaviors while working with teachers to improve the overall quality of the classroom environment.

The National Pyramid Model

- SEFEL (Social and Emotional Foundations for Early Learning) is a framework that promotes the social and emotional development and school readiness of young children from birth through age 8. SEFEL has been successfully implemented in a wide range of Maryland child care settings and is now being adapted for elementary school settings. The SEFEL model is very much a team approach, so experts are not only offering training to Maryland's child care providers, but also to parents, home visitors, child welfare workers and first responders.
